                        HYDRANGEA PETIOLARIS (TRUE)
                           (Climbing Hydrangea)
 *
 - An attractive vine which does equally well in shade or sun. Its foliage
 * is bold, clean and shrub-like and a rich dark green color. Short spur
 - branches are topped with white, fragrant, Hydrangea-like blooms during
 * the summer and lasts for a considerable period. Climbing Hydrangea is
    one of the finest and choicest vines grown. It clings by rootlets to
 * walls and trees without support and can be planted against rocks for a
 - cover. (See colored folder enclosed)
     **500 rooted cuttings from 2\frac{1}{2}" pots (May, 1959 Delivery)

                       (Climbing Hydrangea)
쏬
   An attractive vine which does equally well in shade or sun. Its
                                                                *
   foliage is bold, clean and shrub-like and a rich dark green color.
×
   Short spur branches are topped with white, fragrant, Hydrangea-like
   blooms during the summer and lasts for a considerable period.
   Climbing Hydrangea is one of the finest and choicest vines grown.
   It clings by rootlets to walls and trees without support and can be
*
   planted against rocks for a cover. (Picture of this variety and
   full description is included on enclosed colored folder)

                        RHUS COTINUS ROYAL PURPLE
                  (New dark purple-red leaf Smokebush)
 *
    There are several varieties of Purple Smokebush although Royal Purple
    is considered the very best. A number of varieties of Smokebush have
    been tried out in the nursery with Royal Purple always turning out to
    be the most outstanding. I am convinced of this to the extent that it -
    is the only one now being propagated in the nursery. Royal Purple
    keeps its rich dark purple reddish colored foliage from Spring to late -
    Fall. In late summer the matured leaves show a mottled edge which is
    a light red edge around the dark purple leaf. It is an outstanding
    plant in that it draws the attention of all who visit the nursery and
    is greatly admired for its brilliant foliage. The foliage is darker
 *
    than any red Japanese Maple. The plant is adaptable for use as a lawn *
    specimen especially in locations where the Japanese Maple is not hardy .-
    Royal Purple is the only purple Smokebush to receive a Certificate of *
    Merit from the Royal Horticultural Society. The branches make an ex-
    cellent filler for bouquets especially with Chrysanthemums.
                2-3', 2-5 branches - SOLD OUT FOR SPRING, 1959

## VIBURNUM CARLESI COMPACTA

This plant was discovered several years ago in the nursery in a block of Viburnum carlesi. It is slower growing and has distinct dark green shiny leaves. It grows into a very compact plant and for this reason is called Compacta, ideal for use in foundation plantings. It buds up very heavily when a matured plant. The size, color and fragrance of the flowers are exactly like those of Viburnum carlesi. This plant is a distinct novelty of which a limited quantity is offered for the first time this year.

# HYDRANGEA PETIOLARIS

(Climbing Hydrangea) \*\*\*\*

An attractive vine which does equally well in shade or sun. Its foliage is bold, clean and shrub-like and a rich dark green color. Short spur branches are topped with white, fragrant, Hydrangea-like blooms during the summer and lasts for a considerable period. Climbing Hydrangea is one of the finest and choicest vines grown. It clings by rootlets to walls and trees without support and can be planted against rocks for a cover.

#### VIBURNUM WRIGHTI

Upright and grows slower than Viburnum dilatatum. The leaf is deeply veined and the bright red berries color up in August and remain bright red throughout the fall even after the foliage takes on a fall color. The plant is excellent for berry effect. Being slow growing makes it suitable for use in ranchtype house plantings.
